New vaccine compositions are described which comprise a Streptococcus pneumoniae polypeptide (or fragments) of 80 - 680 amino acids in length that comprise at least one histidine triad residue (HxxHxH) or a coiled-coil region, or an antibody directed against these features. The vaccine is useful in protecting against infection by Streptococcus pneumoniae. The vaccine composition comprising antibodies to is useful for passive immunization for treating pneumococcal infections which includes otitis media, nasopharyngeal

```
CC Streptococcus pneumoniae type 4 strain genomic sequence appearing as CC ABS56454. Also included are an antibody which binds one of the proteins, treating a patient by administering the protein, DNA or CC antibody (in a composition), a kit comprising first and second primers, CC which are the nucleic acid cited above or fragments between nucleotides CB-100 of a sequence not defined in the specification, for amplifying a CC target sequence not defined in the specification, for amplifying a CC target sequence is substantially complementary to the target sequence, and where the parts of the target sequence, and where the parts of the target sequence, and where the parts of the target sequence to be amplified, assay comprising contacting a test compound CC with the protein, and determining whether the test compound CC with the protein, and determining whether the test compound CC genes encoding the proteins has been rendered inactive. The proteins, CC mucleic acid molecules, antibody and compositions are useful as CC medicaments for treating or preventing a disease or infection due to streptococcus bacteria, particularly S. pneumoniae, such as pneumonia, sepsis, otitis media or ear infection. They are also useful in developing vaccines, diagnostics and antibiotics. The methods are useful for CC identifying immunodominant proteins. The present sequence is one of the 2489 identified codding region from the genomic sequence.

CC Note: The sequence data for this patent did not form part of the printed, specification, but was obtained in electronic

New vaccine compositions are described which comprise a Streptococcus pneumoniae polypeptide (or fragments) of 80 - 680 amino acids in length that comprise at least one histidine triad residue (HxxHxH) or a coiled-coil region, or an antibody directed against these features. The vaccine is useful in protecting against infection by Streptococcus pneumoniae. The vaccine composition comprising antibodies to is useful for passive immunization for treating pneumococcal infections which includes otitis media, nasopharyngeal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC proteins, treating a patient by administering the protein, DNA or CC antibody (in a composition), a kit comprising the protein, DNA or CC antibody (in a composition), a kit comprising first and second primers, CC which are the nucleic acid cited above or fragments between nucleic tides CC 8-100 of a sequence not defined in the specification, for amplifying a CC target sequence contained within a Streptococcus nucleic acid sequence, CC where the first primer is substantially complementary to the target sequence, and where the parts of the primers CC complement of the target sequence, and where the parts of the primers CC complement of the target sequence, and where the parts of the primers CC with the protein, and determining whether the test compound binds to the sequence to be amplified, assay comprising contacting a test compound CC with the protein, and determining whether the test compound binds to the protein and a Streptococcus pneumoniae bacterium, where one or more CC genes encoding the proteins has been rendered inactive. The proteins, CC nucleic acid molecules, antibody and compositions are useful as CC medicaments for treating or preventing a disease or infection due to streptococcus bacteria, particularly S. pneumoniae, such as pneumonia, CC sepsis, otitis media or ear infection. They are also useful in developing CC vaccines, diagnostics and antibiotics. The methods are useful for identifying immunodominant proteins. The present sequence is the CC of the printed sence data for this patent did not form parts.

                                                                                                                                                                                                                                                                                                   The nucleic acid sequence encoding the Streptococcus pneumoniae protein can be useful in vaccines for inducing protective antibodies against Streptococcus pneumoniae, for treatment or prevention of infection e.g. pneumonia, otitis media or meningitis. Probes based on the nucleic acid are used to detect Streptococcus infection (by usual hybridisation or amplification methods), also for isolating Streptococcus genes or their allelic variants. The protein can be used similarly to detect specific antibodies in standard immunoassays, especially for diagnosing or monitoring infections. Antibodies which bind the protein are used to detect corresponding antigens, to purify the protein and for passive immunisation (optionally coupled to a toxin). Vaccines are administered, e.g. by injection, orally or through the skin, typically at 0.01-1000 (especially 10-300) mu g/ml per dose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim

The S. pneumoniae antigens have antibacterial activity and can be used in vaccines. The S. pneumoniae antigens can also be used to prevent or attenuate a Streptococcal infection in an animal. The polynucleotides encoding the S. pneumoniae antigens can be used to detect Streptococcus nucleic acids. ABQ84905 to ABQ85130 represent primers used in the cloning of S. pneumoniae ORFs (open reading frawhich are used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New Streptococcus pneumoniae antigens, useful for detecting Streptococcus and for preventing or attenuating disease caustreptococcus infection -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2002-479261/51

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes nucleic acids (1) encoding protein antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence encodes the S. pneumoniae BVH-11-2 protein antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Streptococcal antigens useful for vaccina otitis media, bacteremia and/or pneumonia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (BIOC-)

A polynucleotide (III) encoding (I) is useful in DNA immunisation techniques. The Streptococcus polypeptides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA probes for use in detecting the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcus infections. This sequence encodes the Streptococcus pneumoniae protein BVH-11-2, used to create the antigenic peptides described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes an isolated polypeptide (I) with 70-90% identity to Streptococcus pneumonia protein BVH-3, BVH-11, variants BVH-3 or BVH-11, or chimeric sequences derived from them. A vaccine comprising (I) is useful for therapeutic or prophylactic treatment omeningitis, otitis media, bacteraemia or pneumonia infection in an individual susceptible to these disorders. (II) is also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          meningitis,

CC This
CC This This DNA sequence encodes a 79 kDa protein (see AAY05753) of Streptococcus pneumoniae serotype 4 that is capable of degrading human complement protein C3 (HCPC3). It was identified in the S.

Ş 밁 S 밁 Ş g Ş 멍 Ś

```
pneumoniae serotype 4 genome by alignment to another novel open creading frame (see AAX2533) that codes for a 20 kDa HCPC3 protease C (AAY05752) of S. pneumoniae serotype 3. This suggested the open reading frame that codes for the 20 kDa protein may be part of a clarger open reading frame. Amino acids 1-58 and 90-132 of the 20 kDa protein have substantial sequence identity with amino acids 170-227 and 258-300 of the 79 kDa protein. Proteins and peptides or polypeptides containing these regions, and DNA sequences encoding them (nucleotides 507-681 and 827-99) of the present sequence) are claimed. HCPC3 proteases and polypeptides can be used as immune system stimulating compositions (claimed). They can produce an amamalian subject against S. pneumoniae to immunize or treat a mammalian subject against infection or colonization (claimed). They can produce a B cell response, a T cell response, an epithelial cell response or an endothelial cell response (claimed). The expression of the proteins on the surface of an organ of an animal used in xenotransplantation can be used to inhibit C3-mediated inflammation and rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

Streptococcus pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1) to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1) to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1) to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1) to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1) to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1) to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1) to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1) to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1) to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1) to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1) to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1) to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1) to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1) to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1) to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1) to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1) to 391) where the streptococcus pneumoniae genome genom
                                                                               The present invention describes a computer readable medium which has the nucleotide sequences SEQ ID NO:1 to 391 (AAV5214 to AAV52524) recorded on it, or a representative fragment or a sequence at least identical to SEQ ID NO: 1 to 391. The nucleotide sequences depicted SEQ ID NO:1 to 391 (AAV52134 to AAV52524) are genomic fragments from
                                                                                                                                                                                                                                                 Claim 1;
                                                                                                                                                                                                                                                                                                       pneumoniae
                                                                                                                                                                                                                                                                                                                                Computer-readable medium with recorded Streptococcus pneumoniae polynucleotide sequences - useful in diagnostic kits and assays, pharmaceutical compositions and vaccines for Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          31-OCT-1996;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              30-OCT-1997;

nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEQ ID NO:1 to 391, identifying members of the SEQ ID NO:1 to 391, identifying members of the collating the nucleic acid molecules from the members; or (b) isolating meNA, DNA or CDNA produced from an organism, amplifying nucleic acid molecules whose nucleotide sequence is homologous to amplification primers derived from the fragment of the S. pneumoniae genome to prime the amplification and isolating the amplified sequences. The computer readable medium can be used in a computer-based system for identifying fragments of the S. pneumoniae genome. Products from the present invention can be used in diagnosis kits and assays, and pharmaceutical compositions and vaccines for S. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 and

The present invention describes nucleic acids (I) encoding protein antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence encodes the S. pneumoniae NEW12 protein antigen.

The nucleic acid sequence encoding the Streptococcus pneumoniae protein can be useful in vaccines for inducing protective antibodies against Streptococcus pneumoniae, for treatment or prevention of infection e.g. pneumonia, otitis media or meningitis. Probes based on the nucleic acid are used to detect Streptococcus infection (by usual hybridisation or amplification methods), also for isolating Streptococcus genes or their callelic variants. The protein can be used similarly to detect specific antibodies in standard immunoassays, especially for diagnosing or monitoring infections. Antibodies which bind the protein are used to detect corresponding antigens, to purify the protein and for passive immunisation (optionally coupled to a toxin). Vaccines are administered, e.g. by injection, orally or through the skin, typically at 0.01-1000 (especially 10-300) mu g/ml per dose.

The S. pneumoniae antigens have antibacterial activity and can be used in vaccines. The S. pneumoniae antigens can also be used to prevent or attenuate a Streptococcal infection in an animal. The polynucleotides encoding the S. pneumoniae antigens can be used to detect Streptococcus nucleic acids. ABQ84905 to ABQ85100 represent primers used in the cloning of S. pneumoniae ORFs (open reading frawhich are used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New Streptococcus pneumoniae antigens, useful for detecting Streptococcus and for preventing or attenuating disease causestreptococcus infection -

New vaccine compositions are described which comprise streptococcus pneumoniae polypeptide (or fragments) of 80 . Amino acids in length that comprise at least one histidine triad residue (HxxHxH) or a coiled-coil region, or an antibody directed against these features. The vaccine is useful in protecting against infection by Streptococcus pneumoniae. The vaccine composition comprising antibodies to is useful for passive immunization for treating pneumococcal infections which includes otitis media, nasopharyngeal
                                                                                                                                                                                                                                                                                                                                                                                              Although a number of proteins have been suggested as being involved in the pathogenicity of Streptococcus pneumoniae, there still remains a need to identify polypeptides having epitopes in common from various strains of S. pneumoniae in order to utilise such

AAA05407 to AAA05590 represent specifically claimed nucleotide sequences isolated from S. pneumoniae. The sequences have antibacterial and antiinflammatory properties. The protein sequences, and fragments of them, are useful as immunogens and/or antigens. The nucleotide sequences can be used in vaccines and in diagnostic assays. The proteins and nucleotides can be useful for the detection and diagnosis of S. pneumoniae. The protein sequences are also useful for screening an agent capable of antagonising, inhibiting or interfering with the function or expression of the proteins in which the agent is useful for treatment or prophylaxis of S. pneumoniae infection and maningitis. AAA05591 to AAA05591 represent primers used in the
